# **Emigration Township**

Community Risk Assessment

# **Emigration Township Planning Zone**

UFA has one station within the Emigration Township Planning Zone covering a total of 18.98 square miles with a population of 1,466 and responded to 103 calls for service in 2020.

Planning Zone	Population	Population Percentage of UFA	Square Miles	Population Density per Sq Mile	Classification	
Emigration Township	1,466	0.33%	18.98	77	Rural	

Emigration Township has decreased its population from 1,567 in 2010 to 1,466 in 2020, showing a decrease of 6.89% over a ten-year timeframe. Providing an exponential growth pattern and if all things remain equal, the following chart demonstrates that Emigration Township could decrease its population to 1,292 by the year 2040.

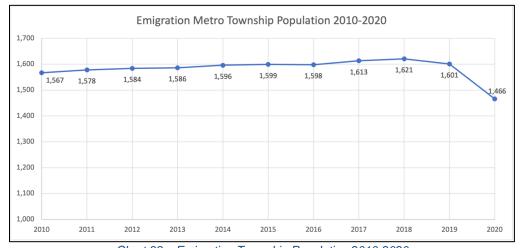

Chart 39 – Emigration Township Population 2010-2020 **Emigration Metro Township Population and Estimates** 1,700 1,567 1,600 1,599 1,500 1,466 1,400 1,443 1,393 1,300 1,292 1,200 1,100 1,000 2010 2040

Chart 40 – Emigration Township Population and Estimates 2010-2040

#### **Emigration Township Station Information**

#### Station 119 information:

- Owner UFSA
- Opened 2007
- Address 5025 Emigration Canyon Road
- Staffing and Apparatus
  - Type 1/3, ME 119 (3 persons)
  - Type 6, Brush Truck (crossstaffed)

Image 11 – Emigration Station 119

#### Surrounding UFA and Automatic/Mutual Aid Response Stations

Surrounding fire stations and fire departments that are within an eight-minute response to Emigration Township are:

- Salt Lake City\* Station 3, with a four-person medic engine
- Salt Lake City\* Station 5, with a four-person medic engine
- Salt Lake City\* Station 10, with a four-person engine
- Salt Lake City\* Station 13, with a four-person engine
- UFA Station 106 (Millcreek City), with a four-person medic ladder and a two-person medic ambulance
- UFA Station 112 (Millcreek City), with a four-person medic engine

#### \* - Of Note...

UFA only relies on Salt Lake City for fire response on mutual and automatic aid and does not currently have Salt Lake City units respond on medical calls

# Emigration Township - Incidents by Dispatch Type

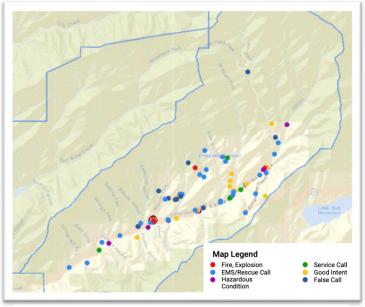

The following data is what the NFIRS type was when crews arrived on scene. This may be different than what was originally dispatched, including a reclassification of a call type from one to another. Cancelled calls occur if the company is cancelled en route to a call and never arrives on scene, which then changes the dispatch type to an NFIRS 611 call type.

	CY 2020	CY 2019	CY 2018
Fire Suppression	4	4	5
EMS	32	39	50
Hazardous Materials	5	4	7
Service Calls	9	8	3
Good Intent	27	13	18
False Calls	13	9	16
Other (Misc., Flood, Overpressure)	0	0	1
Total	90	77	100

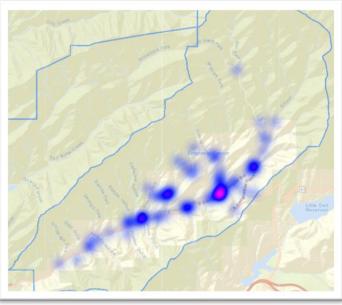

Cancelled	13	6	6
Overall Total	103	83	106

Map 125 – Emigration Call Volume Heat Map

#### **NFPA 1710**

The National Fire Protection Association is an international nonprofit organization that is devoted to eliminating death, injury, property, and economic loss due to fire, electrical and related hazards. The NFPA makes recommendations on over 300 codes and standards. NFPA 1710 recommendations are based off 90<sup>th</sup> percentile times.

# Q- In Other Words...

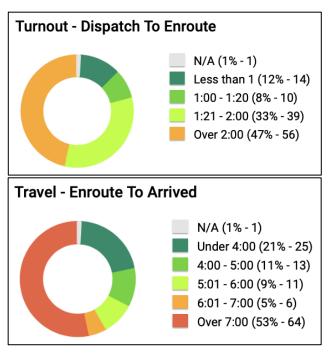

If a value is in the 90<sup>th</sup> percentile, it means the value is better than 90% of all other values in the dataset. In other words, it is within the top 10% of the values.

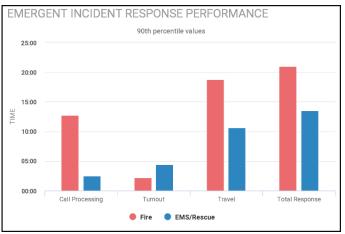

NFPA 1710 encompasses suggested standards for full-time fire departments and recommends the following times (all of which are at the 90<sup>th</sup> percentile): alarm processing – 64 seconds; turnout time for EMS responses – 60 seconds; turnout time for fire responses – 80 seconds; first arriver apparatus – 240 seconds (4 minutes); initial full-alarm assignment for low and medium hazard responses – 480 seconds (8 minutes); or initial full-alarm assignment for high hazard/high-rise responses – 610 seconds (10 minutes 10 seconds). The total response times are the cumulative totals of call processing time, turnout time, and travel time. NFPA 1710 recommends a total response time of 6:24 for the first arriving apparatus for fire and 6:00 for the first arriving apparatus for EMS.

#### ♣ – Of Note...

NFPA 1710 response times have not been adopted by the UFA Board. One of the important elements of the community risk assessment and standards of cover is to identify current 90th percentile times (current baselines) within UFA and to identify realistic benchmarks for the UFA Board to consider for adoption.

# Emigration Township - 2020 Dispatch and Response Times

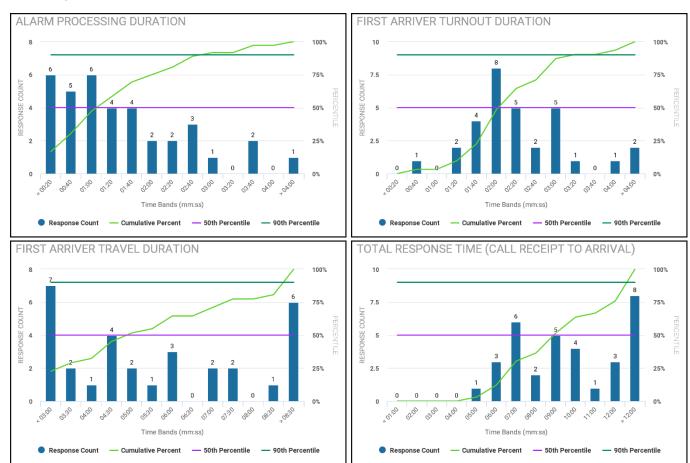

Rural	Call Processing: Fire	Turnout Time: Fire	Travel Time: Fire	Total Response: Fire	Call Processing: EMS	Turnout Time: EMS	Travel Time: EMS	Total Response: EMS
Emigration	2:36	3:04	13:50	16:56	2:27	4:23	10:37	13:50
UFA Urban 2018-2020	2:16	2:39	7:36	10:34	1:47	2:32	6:29	9:18
UFA Rural 2018-2020	2:32	3:05	15:08	19:09	1:56	2:50	14:45	17:45
NFPA 1710	1:04	1:20	4:00	6:24	1:00	1:00	4:00	6:00

Table 85 – Emigration 2020 Emergent Response Times, 90th percentile values

# Emigration Township – 2020 Turnout and Travel Time

The charts above illustrate the alarm processing, turnout and travel times for all units responding to service calls within Emigration Township (90<sup>th</sup> percentile). The alarm processing for fire was 2:36 and 2:27 for EMS; turnout time was 3:04 for fire responses and 4:23 for EMS responses; travel time was 13:50 for fire responses and 10:37 for EMS. The 90<sup>th</sup> percentile total response time was 16:56 for fire and 10:37 for EMS. For the charts above, they show both fire and EMS response times together.

#### ♣ – Of Note...

One item to note is that if you were to add the processing time, the turnout time, and the travel time, it will not necessarily (and often doesn't), sum the total response time. This is due to some of the limitations within the datasets and gaps within timestamps. Where there are missing timestamps, those particular key performance indicators (KPI) are excluded as they cannot accurately be calculated out.

# Emigration Township – 2020 Incidents by Time of Day

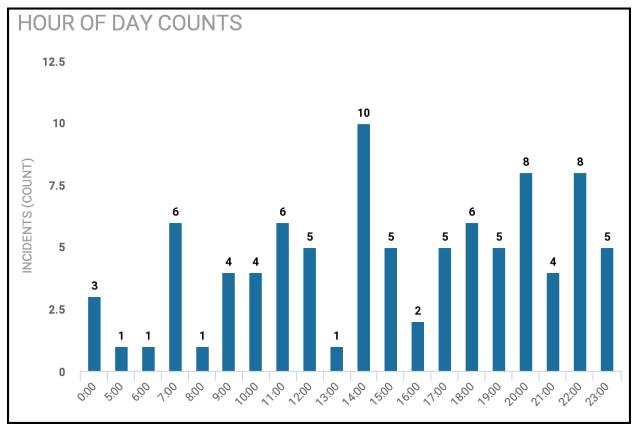

Chart 41 – Emigration 2020 Incidents by Time of Day

The above table demonstrates the incidents by time of day and the time of greatest demand within Emigration Township for all service calls. This chart illustrates that the greatest demand for service delivery is at 2:00 PM.

# Emigration – 2020 Incidents by Day of Week

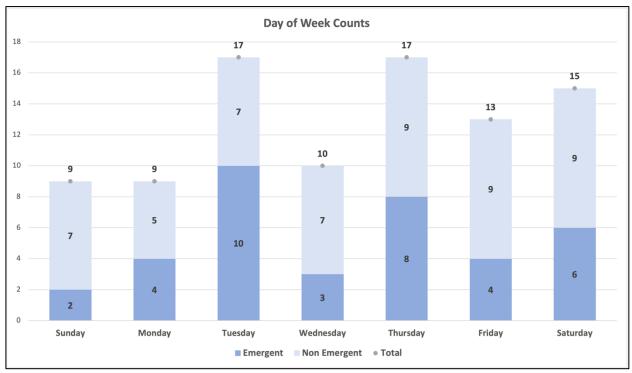

Chart 42 - Emigration Incidents by Day of Week

This chart demonstrates the call volume based on the day of the week, with Tuesdays and Thursdays having the most overall calls in Emigration Township.

### Emigration - EMS Calls

EMS calls are filtered by final disposition codes and this data is taken from VECC and determined by the patient acuity at the time of call termination. Often times the EMS calls identified from final disposition are different than the number of EMS calls that were initially dispatched due to one being the initial call type, and one being what call type the call was closed as by responding fire crews.

	CY 2020	CY 2019	CY 2018
ALS Transports	12	15	33
<b>BLS Transports</b>	14	20	14
Scene Release	9	2	2
Public Assistance	4	2	0
<b>EMS Total Calls</b>	35	37	49

Note: There is possibly a difference if you were to add all calls due to data reporting mechanisms. Public assistance calls will sometimes get duplicated with a scene release, depending on dispatch code, but those calls do not carry across to the total calls. Also, cancelled calls go into a different final disposition so the numbers in the 'Incidents by Dispatch Type' are reflective of this difference.

Table 86 - Emigration Township EMS Calls

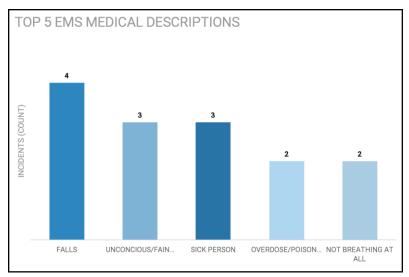

Chart 43 - Top 5 EMS Medical Calls - 2020

# Emigration Township – 2020 Fire Incidents by Dispatch Type

NFIRS Description	Incident Count	% of Incidents
Structure Fire	2	50%
Mobile Property Fire	1	25%

NFIRS	Incident	% of
Description	Count	Incidents
Outside		
Rubbish	1	25%
Fire		
Total	4	100%

Table 87 – Emigration 2020 Incidents by Dispatch Type

# Emigration Township - Building Occupancy Classification and Risk Categories

Occupancy	Low	Moderate	High	Maximum	Total
Classification					
Assembly	1	0	0	0	1
Commercial/Industrial	1	1	0	0	2
Educational	0	0	0	0	0
Government	0	0	0	0	0
Healthcare	0	0	0	0	0
Hazardous	Unknown	Unknown	Unknown	Unknown	0*
Storage	0	0	0	0	0
Residential	0	14	12	1	27
Residential - Multi	10	3	1	0	14
Unit					
High Rise	N/A	N/A	0	0	0
Total	12	18	13	1	44

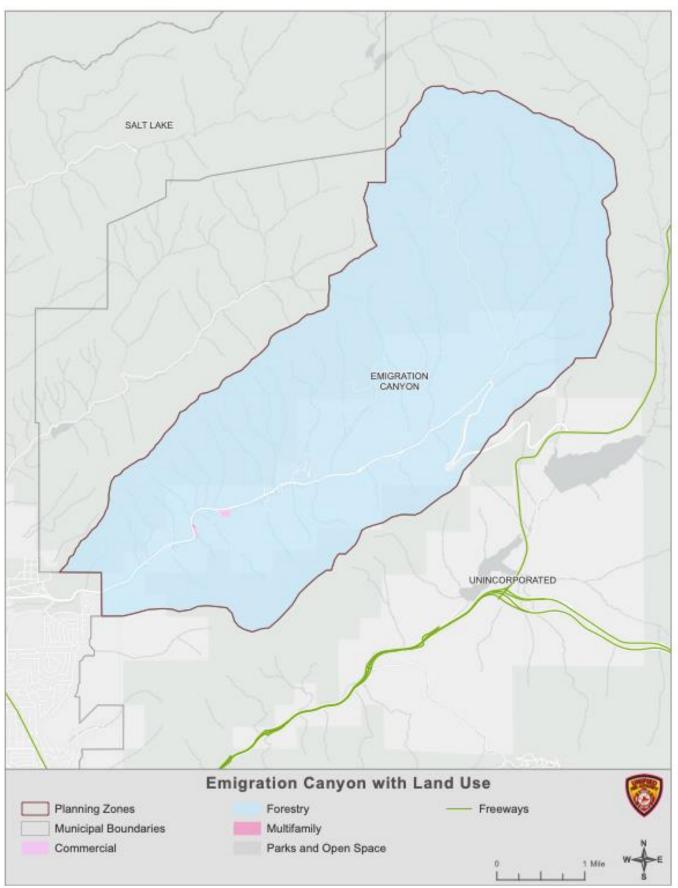

<sup>\*</sup>There is currently a gap within the identification of building size regarding hazardous materials sites. This is a gap that is being closed over the next several years as we collect the data and information.

Table 88 – Emigration Building Occupancy and Risk Categories

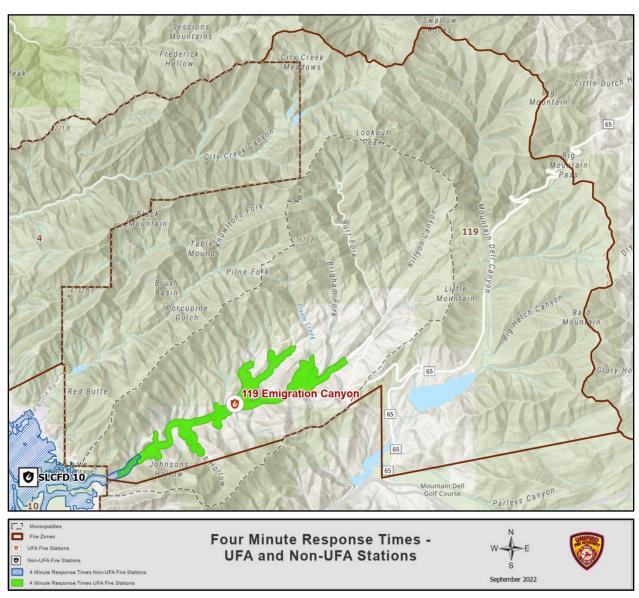

#### **Building Size / Considerations**

For purposes of risk classification, UFA has outlined the following risk classifications for building size, regardless of occupancy type (except residential). Low risk = 1-4,999 square feet. Moderate risk = 5,000-9,999 square feet. High risk = 10,000-99,999 square feet. Maximum risk = 10,000-99,999 square feet.

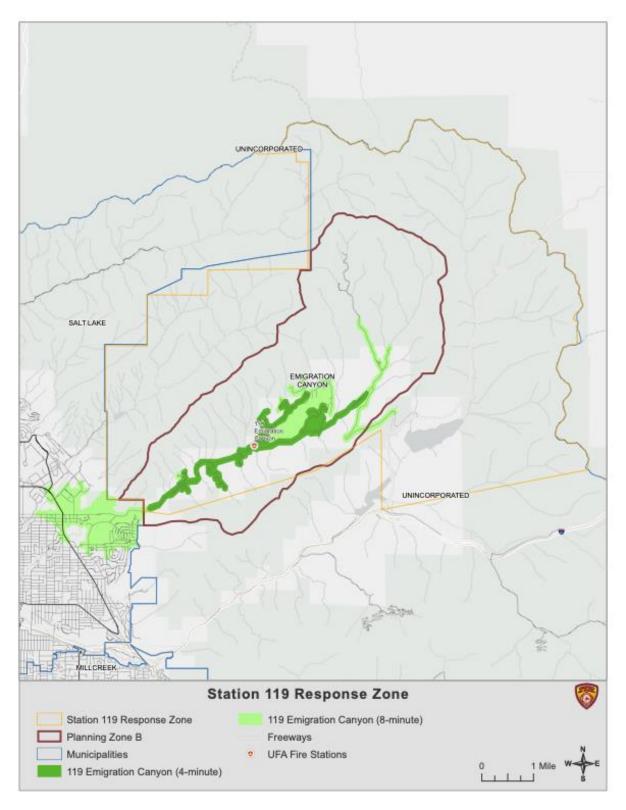

For residential occupancies, the following classifications apply. Low risk = 1-1,999 square feet. Moderate risk = 2,000-3,999 square feet. High risk = 4,000-9,999 square feet. Maximum risk =  $\geq 10,000$  square feet.

Map 126 – Emigration with Land Use

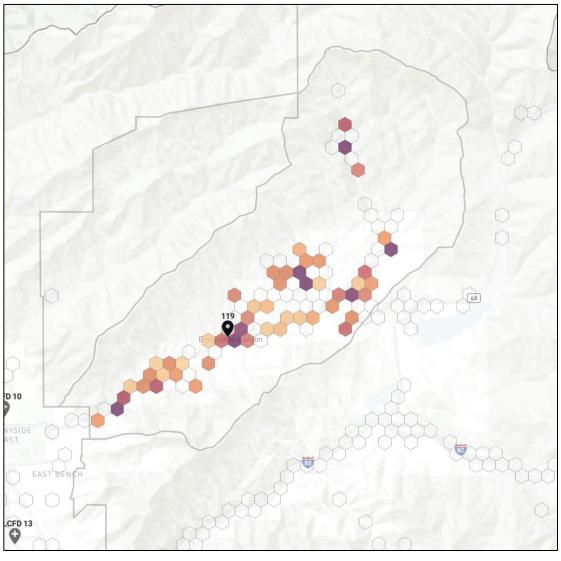

Map 127 - 4-Minute Travel Time, UFA and Aid

Map 128 - Station 119 4- and 8-Minute Travel Times

#### Emigration Township – First Arriver Travel Times

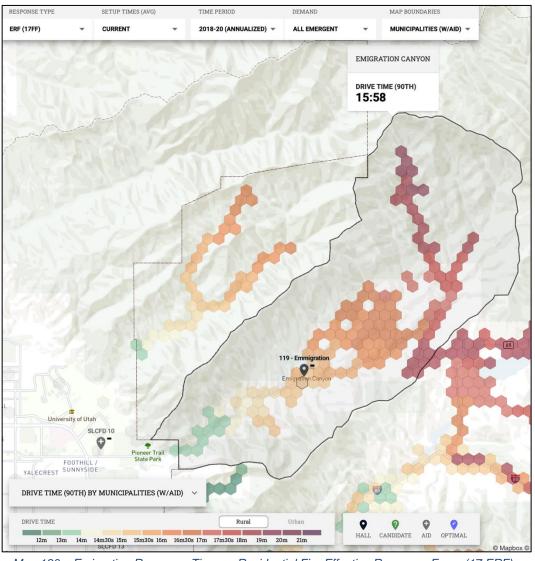

The following maps demonstrate the 90<sup>th</sup> percentile of travel times based off the last three years of historical data (2018-2020). The darker the color is, the more delayed the response, with the green and light colors demonstrating below or near target times. The darker colors on the bar within the key demonstrating longer travel times by apparatus. This map's drive times (or travel times) are based off the current NFPA 1710 standard of four minutes (90<sup>th</sup> percentile) from notification of the alarm to the arrival of the first arriving apparatus — not an adopted standard by UFA. UFA is currently in process of identifying benchmark and target standards to be adopted by the UFA Board of Directors. Currently, within Emigration, the 90<sup>th</sup> percentile drive time is 13:50 for fire and 10:37 for EMS, or a combined 90<sup>th</sup> percentile drive time of 11:48.

Map 129 - Emigration Response Times - All Aid

# Emigration Township – Residential Fire Effective Response Force (17 FF)

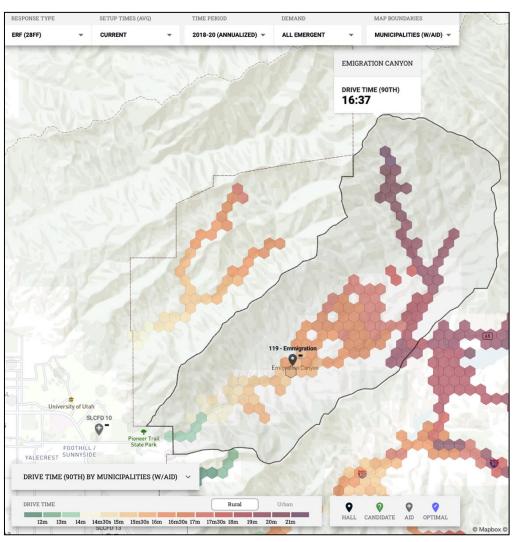

This map demonstrates the coverage of a multi-unit response to a residential fire based off all apparatus being within their station. The green to light yellow demonstrates the ability to have seventeen firefighters (a residential fire effective response force) on scene based off a residential urban fire force response. This map's drive times (or travel times) are based off the current NFPA 1710 standard of eight minutes (90<sup>th</sup> percentile) from notification of the alarm to the arrival of the initial full alarm assignment (a minimum of 17 firefighters) for a residential, low, or medium hazard assembly — not an adopted standard by UFA. UFA is currently in process of identifying benchmark and target standards to be adopted by the UFA Board of Directors. Based off predictive data, it is projected that the 90th percentile for 17 firefighters to arrive on scene would be 15:58.

Map 130 – Emigration Response Times – Residential Fire Effective Response Force (17 ERF)

# Emigration Township – Commercial Fire Effective Response Force (28 FF)

This map demonstrates the coverage of a multi-unit response to a commercial fire based off all apparatus being within their station. The green to light yellow demonstrates the ability to have twenty-eight firefighters (a commercial fire effective response force) on scene based off a residential urban fire force response. This map's drive times (or travel times) are based off the current NFPA 1710 standard of ten minutes and 10 seconds (90th percentile) from notification of the alarm to the arrival of the initial full alarm assignment (a minimum of 28 firefighters) for a commercial, high hazard or high-rise assembly — not an adopted standard by UFA. UFA is currently in process of identifying benchmark and target standards to be adopted by the UFA Board of Directors. Based off predictive data, it is projected that the 90th percentile for 28 firefighters to arrive on scene would be 16:37.

Map 131 – Emigration Response Times – Commercial Fire Effective Response Force (28 FF)

#### **Emigration Township Risk Assessments**

Infrastructure – Transportation	Infrastructure – Dams	Earthquake Liquefaction	Earthquake Faults	Avalanche	Unreinforced Masonry	Wildland Urban Interface	Tier II Sites	Hospitals	Schools	≥100,000 sq ft Structures	Residential Population
Low	Low	Low	Low	Low	Mod	High	Low	Low	Low	Low	Low

Table 89 - Emigration Hazard Matrix

Transportation: Low Risk = 0-99 Linear Miles; Moderate Risk = 100-199 Linear Miles; High Risk = >200 Linear Miles

Dams: Low Risk = 0-3; Moderate Risk = 4-6; High Risk = ≥7

Liquefaction: The areas of liquefaction vary throughout the valley, with areas of high susceptibility running South and East from the Great Salt Lake

Earthquake Faults: Low Risk = 0-30,000 LF of fault line; Moderate Risk = 30,001-60,000 LF of fault line; High Risk = ≥60.001 LF of fault line

Unreinforced Masonry: Low Risk = 0-100; Moderate Risk = 101-1,000; High Risk = ≥1,001

Wildland Urban Interface: Low Risk = 0-25% WUI; Moderate Risk = 26-50% WUI; High Risk = ≥51% WUI

Tier II Sites: Low Risk = 1-5; Moderate Risk = 6-10; High Risk = ≥11

Hospitals: Low Risk = 0; Moderate Risk = 1; High Risk = ≥2

Schools: Low Risk = 0-5; Moderate Risk = 6-10; High Risk ≥11

100,000 sq ft Buildings: Low Risk = 0-5; Moderate Risk = 6-14; High Risk = ≥15

Population: Low Risk = 1-19,999; Moderate Risk = 20,000-39,999; High Risk = ≥40,000

#### Infrastructure – Transportation

The primary roadway that runs through Emigration Township is Emigration Canyon Road which runs east/west between State Road 186 and I-80. There are 0 linear miles of Interstate/US Highway, 0 linear miles of State Highways, and 25.7 total linear miles of roadway. Emigration Township is in the low-risk category for road infrastructure.

#### Infrastructure - Water

There are two water districts within Emigration Township. The Emigration Improvement District, and the Salt Lake City Water Department. The Salt Lake City Water Department that covers from the west end of the canyon up to the Maryfield Drive area and the Emigration Improvement District covers the rest of the canyon.

#### Infrastructure - Dams

There are two identified dams within Emigration Township. Emigration is in the low-risk category for dam infrastructure.

#### **Natural Hazards**

Within Emigration Township, there are low concerns with avalanche areas, placing it in the low-risk category for avalanche. There are no identified fault lines that run through the city (see Map 8). Emigration is in the low-risk category for liquefaction and low-risk category for fault lines. One of the biggest hazards that occur within an earthquake scenario is the number of unreinforced masonry (URM) buildings. Within Emigration Township, there are an estimated 44 URM's, which constitutes about 0.18% of the overall URM's within UFA's response areas. Emigration is in the moderate-risk category for unreinforced masonry.

#### Wildland Urban Interface

There is high risk of urban interface fires within Emigration Township and within Emigration Canyon. One of the primary hazards is the lack of egress routes going out of the canyon. Emigration is in the high-risk category for Wildland Urban Interface.

#### Hazardous Materials / Tier II Sites

There are no identified HazMat/Tier II Sites within Emigration Township, which is in the low-risk category.

#### Hospitals

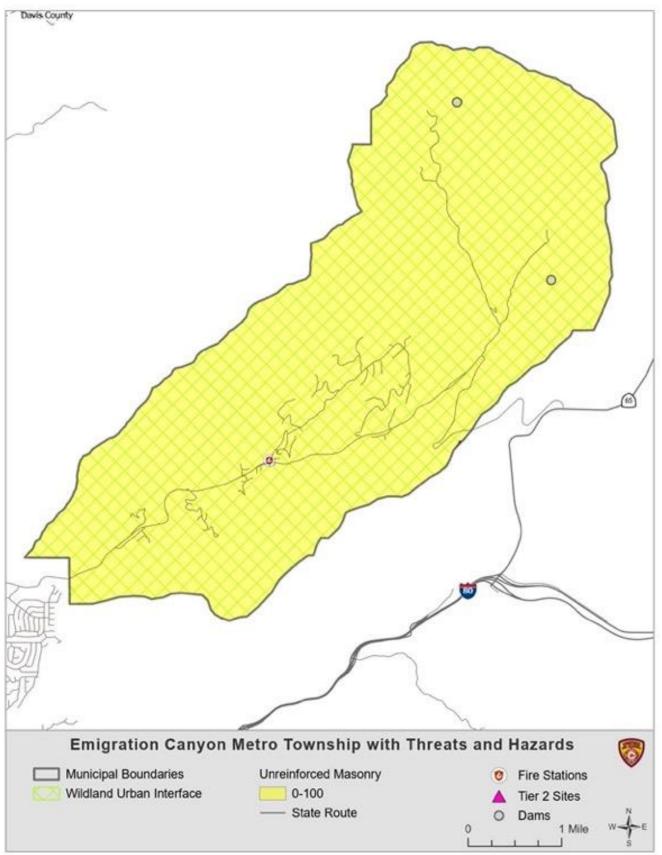

Emigration Township has no hospitals. This places Emigration in the low-risk category for hospitals.

#### **Schools**

Emigration Township has zero elementary schools, zero middle schools, and zero high school within city boundaries, which places it in the low-risk category.

#### **Target Hazards**

- Pinecrest Community Access/Egress
- Killion Canyon Community Access/Egress
- Sunnydale Community Access/Egress
- Chevron Pipeline
- Citygate Pipeline
- Emigration Canyon Road is an alternative to I-80 when I-80 is closed for various reasons

Map 132 – Emigration Township with Combined Hazards

#### Life and Property Loss

From 2015-2020, there have been zero fatalities attributed to fire. There has been a total estimate of \$1,914,700.00 of property loss and a total estimate of \$1,203,500.00 of content loss due to fire.

#### **Unified Fire Shared Services**

With a regional-response model, the Unified Fire Authority brings special services to bear when the situation calls for it, not relying on automatic or mutual aid which provides a quicker and more effective delivery of service to its residents.

#### **Battalion Chiefs**

Unified Fire Authority staffs three operational battalion chiefs (BCs) daily, in addition to a 40-hour Operations Chief (OC). These BCs and OC respond to large, complex, or expanding incidents — providing incident command, safety, and operational direction. Each BC covers an area of UFA's service area and respond to calls for service in any jurisdiction. Battalion 11 is housed out of Station 101 in Millcreek, Battalion 12 is housed out of Station 121 in Riverton, and Battalion 13 is housed out of Station 118 in Taylorsville.

#### Heavy Rescue Companies

Heavy Rescue specializes in structural collapse, confined space rescue, trench collapse rescue, vehicle extrication, machinery disentanglement, rope rescue (high angle, low angle, rigging) and rapid intervention (Firefighter Rescue). The UFA Heavy Rescue Program consists of two independent rescue companies strategically placed in UFA's jurisdiction. Station 117 in Taylorsville, and Station 121 in Riverton house our Heavy Rescue Teams.

#### Hazardous Materials (HazMat) Companies

The Hazardous Materials Teams provide an efficient, effective, and professional Hazardous Material Mitigation response. HazMat Companies respond to hazardous material releases/spills for the purpose of mitigating the release/spill. They select and use proper specialized chemical personal protective equipment dependent on the nature of the incident. The HazMat Program consists of two independent HazMat

companies strategically placed in UFA's jurisdiction. Station 124 in Riverton, and Station 126 in Midvale house our HazMat Teams.

#### Water Rescue Teams

UFA has a swift water team, ice rescue team, as well as a dive rescue team. These companies respond to victims recreating in our swift canyon rivers and our lakes and reservoirs. Station 116 in Cottonwood Heights, Station 117 in Taylorsville, Station 121 in Riverton, and Station 123 in Herriman house Water Rescue Companies.

#### Wildland Division

UFA's Wildland Division provides highly trained and experienced wildland fire and allrisk response resources to local, state, and federal incidents. The Wildland Division
oversees the training and certification of UFA personnel for response to wildland fires
and all-hazard incidents. We also work with UFA Communities to educate residents on
wildfire preparedness and provide mitigation services to reduce the risks of wildfire.
UFA has a special capability where a Duty Officer is able to act as the Fire Warden
within UFA's jurisdictions, allowing the ordering of resources much more quickly than
having to rely on a Fire Warden that may or may not be readily accessible. Station 103
in Herriman currently houses the Duty Officer.

#### **Investigations Division**

Arson and Explosive related incidents are considered two of the most dangerous criminal activities that threaten our citizens. The need exists to protect the citizens of our jurisdiction from loss of life and property by reducing the crime of arson, arson-related crimes, improvised explosive devices (IEDS) and the prevention of future violent crimes. The Investigations Division addresses this need by establishing a sound foundation of effective enforcement, focusing on the apprehension of the offender, while in partnership with other Local, state and federal law enforcement agencies. The team utilizes highly-trained Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF) certified K-9's that assist with accelerant and explosives detection.

#### Urban Search & Rescue

A FEMA Urban Search and Rescue Task Force is a team of individuals which serve as a resource for disaster response at local, state, and federal levels. It is comprised mainly of firefighters but includes structural engineers, medical professionals,

canine/handler teams and emergency managers with highly specialized training in urban search and rescue environments.

Utah Task Force 1 (UT-TF1) is one of 28 Type I, Federal Urban Search & Rescue (US&R) Task Forces in the United States. This program brings a highly trained, multi-hazard Task Force that is especially designed to respond to a variety of emergencies/disasters including earthquakes, hurricanes, tornadoes, floods, terrorist acts and hazardous material releases. Fire department personnel that are task force members receive specialized training and skills that directly benefit Unified Fire Authority.

#### Salt Lake County Emergency Management

The Salt Lake County Division of Emergency Management serves our citizens by directing and coordinating resources for disasters and emergencies through preparation, planning, mitigation, response, and recovery. The Salt Lake County Emergency Coordination Center is activated and manned during any event—from small-scale to large-scale occurrences—to disasters both natural and man-made that can or have exceeded the resources of any particular jurisdiction. Currently, the Salt Lake County ECC assists and obtains resources for the 22 jurisdictions located within the Salt Lake Valley. Salt Lake County EM assists these jurisdictions through the activation of 15 Emergency Support Functions (ESFs) filled by employees from a multitude of backgrounds. The ESF employees have authority throughout Salt Lake County to fill and order additional support for the operations occurring in the field until the impacted jurisdiction can return to their normal operations and functions. The Emergency Management Division is committed to keeping the public safe through community outreach, training, dissemination of important public information, training of staff and the creation of a more resilient community through mitigation, preparation, response, and recovery. The ECC has been activated for many events such as Child Abduction Response Team (CART) Deployments, wildland fires such as the Rosecrest and Machine Gun fires, flooding, severe weather events, earthquakes, civil unrest, the COVID-19 pandemic, Line of Duty Deaths (LODD), and many other events.

# **Unified Fire Authority**

3380 South 900 West Salt Lake City, UT 84119
